

This listing of claims will replace all prior versions, and listings, of claims in the application:

1.(Currently Amended) Process for preparing oxcarbazepine of formula

(I)

which comprises includes:

a) reacting in a [[the]] chlorocarbonylation reaction [[of]] the compound of formula

(II)

with triphosgene in the presence of a base, to give the compound of formula

(III)

2.(Currently Amended) The process of ~~Process according to Claim 1, which~~  
further comprises subsequently includes:

- b) ammonolysis of the compound of formula III to give the compound of formula

and

- c) deprotecting the compound of formula IV by acid hydrolysis of the compound of formula IV to give oxcarbazepine [[1]] of formula (I)

3.(Currently Amended) The process of claim 1~~Process according to Claim 1 or 2,~~  
in which ~~[[the]]~~ said chlorocarbonylation reaction a) is performed with  
triphosgene in a triphosgene molar ratio, relative to the compound of formula II,  
of between 0.46:1 and 0.54:1 ~~and more preferably at about 0.5:1.~~

4.(Currently Amended) The process of claim 1, wherein the base is ~~Process~~  
~~according to Claims 1 to 3, in which the said chlorocarbonylation reaction a) is~~  
~~performed using triethylamine as base, in a~~ base molar ratio relative to the

compound of formula II of between 1.4: 1 and 1.6:1 ~~and preferably at about~~  
4.5:1.

5.(Currently Amended)     The process of claim 1, ~~Process according to Claims 1 to~~  
4, in which [[the]] said chlorocarbonylation reaction a) is performed in toluene  
[[and]] at a temperature of between 90 and 110°C.

6.(Currently Amended)     The process of claim 2~~Process according to Claims 2 to~~  
5, in which the ammonolysis b) is performed with aqueous ammonia in  
methanol.

7.(Currently Amended)     The process of claim 2~~Process according to Claims 2 to~~  
6, in which the deprotecting step ~~deprotection~~ c) is performed with hydrochloric  
acid in aqueous medium at a pH of about 1 and at a deprotecting temperature  
of between 90 and 95°C.

8.(New)     The process of claim 1, in which said chlorocarbonylation reaction a) is  
performed with triphosgene in a triphosgene molar ratio, relative to the  
compound of formula II, of about 0.5:1

9.(New)     The process of claim 1, wherein the base is triethylamine, in a base  
molar ratio relative to the compound of formula II of about 0.5:1
